Welcome

BT Mini Hub Kit user guide
Hello

This handy kit is a great way to extend broadband round your home.

Here’s what’s in this guide

What’s in the box 2
What an extended network looks like 3
How to set up and get connected 4
Troubleshooting 6
How to reset your kit 9
Need some help? 10
Other information 11

Thanks again for choosing BT.
What an extended network looks like

Have a quick look at what’s what below. Then turn the page and follow the set-up steps.

Got a bundle, like BT Smart Hub or BT TV, too?
Set up your Smart Hub first before setting up anything else.

For more help, go to bt.com/help/minihub
How to set up and get connected

1 Connect the Mini Connector

1 Plug one end of the Ethernet cable into any Ethernet port on your Smart Hub.
2 Plug the other end into one of the Ethernet ports on top of your Mini Connector.
3 Plug the Mini Connector directly into a power socket on the wall and switch on. The Power and Ethernet lights will come on.

Using extension leads
You can use power extension leads but you need to connect them like this:

No free extra socket? Plug your device or BT Smart Hub into the Connector.
2 Plug in the Mini Hub

Go to the part of your home where you want to improve your wireless signal. Then plug the Mini Hub into a power socket on the wall and switch the socket on. Check that the Mini Hub is also on. The Power light will come on first then, within a minute, the Wireless and Data lights too.

Data light Wireless light

Power light

3 Connect your devices

You’ll need your Mini Hub’s wireless network name and password. They’re on the back of your Mini Hub.

If your device supports WPS, just press (WPS) on your Mini Hub. It’s a quick way to connect.

Know your networks

The Mini Hub is dual-band, so you’ll see two network names on the card, one for the 2.4GHz band and one for the 5GHz band. The wireless password is the same for both.

Don’t want to use wireless?

Using an Ethernet cable, connect your device to either Ethernet port on the top of the Mini Hub.

All done.

</table>
How to reset your kit

If your Mini Hub or Mini Connector stops working or becomes unpaired, turn it off and then on to restart it. If it still isn’t working, reset to factory settings using these steps.

1. Make sure the Mini Hub or Mini Connector is plugged in and the power socket is switched on.

2. Press and hold the + (Add) button on the Mini Connector for more than 15 seconds, or the F. Reset button on the Mini Hub for one second to go back to its original settings.

Give it a couple of minutes. If everything’s okay, the Power, Data, Ethernet and Wireless lights will come on.

**Remember:** if you reset your Mini Hub, you’ll lose any settings that you might’ve changed, like your wireless network name or wireless password.

**Stuck?**
